APPROVED & CERTIFIED

WHAT IS SECURLUX®

THE CAR WINDOW SAFETY FILM from FOLIATEC.com

SECURLUX® from FOLIATEC® is a high quality automotive window safety film that provides significant extra protection for the occupants of all vehicle types. And this in a number of aspects. Thanks to the special construction, SECURLUX® reduces the danger of injury from glass splinters in an accident, guards against break-ins and has a 99 percent UV filter in comparison to standard car windows.

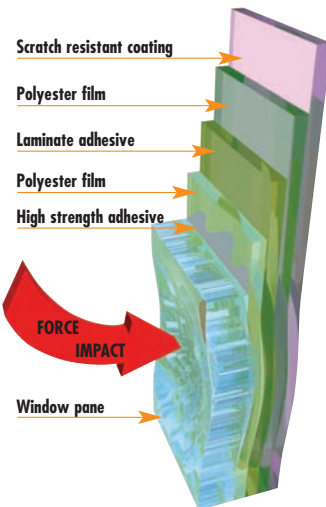

The exceptional properties of SECURLUX® are achieved through the multi-layer construction. Up to three polyester films bonded with clear laminate adhesive make the SECURLUX® extremely resistant to impact and breaking. A scratch resistant coating protects the film from scratches. A pressure sensitive mounting adhesive bonds the window pane and the SECURLUX® safety film, which then protects from glass splinters like a laminated windshield.

EFFECT

- SECURLUX® IS A HIGH-STRENGTH AUTOMOTIVE WINDOW SAFETY FILM.
- SECURLUX® PROVIDES PROTECTION FROM SPLINTERS, BREAK-INS AND UV-RAYS.
- UP TO THREE FILM LAYERS PROTECT THE OCCUPANTS.

MORE PROTECTION - MORE SAFETY

BREAK-IN PROTECTION

FOR YOUR VEHICLE AND YOUR VALUABLES

In the year 2004, the Federal Criminal Investigation Department in Germany registered over 58,000 car thefts and over 439,000 vehicle break-ins! One of the most frequent methods used to force entry into the vehicle is to break a side window. Now, the extremely impact resistant and break-through impeding SECURLUX® safety film puts an end to that.

WITH SECURLUX® FILM

On the basis of up to three break resistant layers and the reliable bonding of the film with the window pane, the glass no longer shatters into a thousand splinters from an exterior forced impact. The window pane equipped with SECURLUX® remains intact in the frame. Tests have shown that the SECURLUX® car window film resists even severe and multiple attacks with a variety of burglar tools.

WITHOUT SECURLUX® FILM

EFFECT

- SECURLUX® PROTECTS AGAINST VEHICLE BREAK-INS.
- SECURLUX® KEEPS THE WINDOW PANE INTACT IN THE FRAME.
- SECURLUX® RESISTS EVEN SEVERE ATTACKS.

UV-PROTECTION

SUN PROTECTION FACTOR OF 180 FOR YOUR SKIN

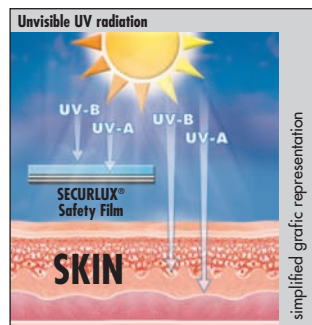

According to the German Cancer Society, over 144,000 people in Germany get skin cancer each year. About 22,000 of these skin cancer cases are malignant, the so-called "Black Skin Cancer". The mortality rate is approximately 2,300 deaths per year. A cause for this is found in the excessive exposure to the UV radiation of the sun. Especially children should be protected, because their skin reaction is very sensitive.

SECURLUX® is also a reliable partner in this important case. Thanks to the special construction of the safety film it has 99 percent protection from UV radiation and a Sun Protection Factor of 180 as determined by the Laboratory for Technical Optics and Optoelectronics at the Georg-Simon-Ohm Fachhochschule (University of Applied Sciences) in Nuremberg. This corresponds to the six fold of a regular sun blocker (SPF 30).

EFFECT

- SECURLUX® PROVIDES 99% PROTECTION FROM UV RADIATION.
- SECURLUX® HAS A SUN PROTECTION FACTOR OF 180.

PASSENGER-PROTECTION

SECURLUX® REDUCES THE RISK OF INJURY

According to the German Automotive Club ADAC, in the year 2004 there were over 446,000 persons involved in traffic accidents in Germany. A frequent type of injury, among others, were cuts caused by flying glass splinters. SECURLUX® reduces the risk of this type of injury. Even though the glass window breaks it remains intact in the window frame due to the strong adhesive bond of the safety film. Thanks to SECURLUX® the occupants are hardly subject to the risk of injury from flying glass splinters.

In a **DEKRA ram** impact test (M050405001) the glass splinter protection was tested on the basis of a simulated side impact and effectively confirmed.

WITHOUT SECURLUX® FILM

In the DEKRA test center a side impact is simulated without SECURLUX®. In the test it is evident that the side window breaks into a thousand glass splinters and that they enter the interior of the vehicle. They represent a high risk of injury to the occupants of the vehicle.

WITH SECURLUX® FILM

The test with the SECURLUX® safety film provides conclusive evidence for the protection from glass splinters. The side impact breaks the glass, but it remains intact in the window frame. Thanks to SECURLUX® there are no glass splinters that penetrate the interior and pose a risk of injury to the occupants.

EFFECT

- SECURLUX® PROVIDES PASSIVE PROTECTION IN ACTIVE TRAFFIC.
- SECURLUX® KEEPS YOU SAFE FROM CUTS.
- THE SECURLUX® SAFETY FILM PREVENTS GLASS SPLINTERS.

SAFETY

SECURLUX® PROTECTS THE POLICE AND RACECAR DRIVERS

The fact that the police, security firms and transport companies use SECURLUX® shows how safe the SECURLUX® car window film is. Even the squad cars of the police in Germany are equipped with the safety film from FOLIATEC®.

The SECURLUX® is applied to both sides of the windowpane in these special areas of use and thereby attains the break-proof classification of P3A. The police officers in the vehicles are thereby best protected against external force such as rocks that are thrown.

SECURLUX® meets highest standards even in motor sports. Point 11 in Article 253 of supplement J and K in the international sport legislation of the FIA prescribes transparent and colorless safety film on the side windows. SECURLUX® meets this demand and is used in motor sports.
